

Every. **Carbon.** Count

June 2024

<https://token-anagata.io>

## OUR VISION & MISSION

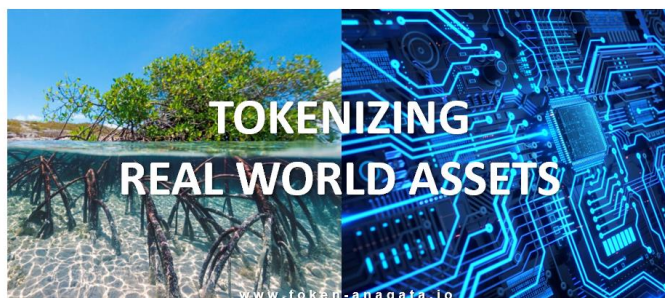

Anagata's (AHA) **VISION** is to be a trustable and biggest token from Indonesia for carbon dioxide (CO<sub>2</sub>) reduction, by collaborating with green projects and developing carbon **tracking, investment & donation** platform. Anagata (AHA) is a decentralized token based on the Binance Smart Chain (BSC), that has already been officially subscribed in December 2021. Starting from Indonesia, Anagata (AHA) will support global green projects with sustainable economic value in the future.

### Environment Sustainability requires Collaborative Action

In the next 5 years, Anagata's primary **MISSION** is to support and accelerate CO<sub>2</sub> reduction in Indonesia and Asia region, therefore it's our priority that we collaborate with all key stakeholders that are highly relevant and important to reach ESG (environmental, social, and governance) goals.

Three main actions to reduce CO<sub>2</sub> are replacing fossil energy with green energy, maintain and increase trees / mangrove planting and tax carbon producers / carbon offset, all of it requires a proper way of carbon tracking (registry). With many concerns on transparency and accountability for carbon tracking, blockchain technology is the strategic option to have an integrated solution.

### BLOCKCHAIN + UNDERLYING ASSETS

# OUR SOLUTIONS

In order to achieve a net zero emissions, it is crucial for calculating the carbon footprint and identifying carbon reduction efforts. The Obligations for this carbon deficiency (especially in corporate & industry) require carbon credits that have been registered and recognized internationally. In the short term, the Anagata (AHA) Project will focus on two main activities : **carbon footprint capture** and **carbon registry**.

Our solution will be utilizing blockchain technology to track CO<sub>2</sub>, to ensure transparency and accountability. Anagata (AHA) will be collaborating with **existing green projects** and **future green projects**, to enable larger areas that will be covered and optimizing CO<sub>2</sub> reduction within specific regions that require more support and to have a mass movement.

## Democratizing Carbon Adoption

Anagata (AHA) platform key utilities will be:

- ❖ **Investment** and **Donation** for green projects
  - Green Sustainability
  - Green Energy projects
  
- ❖ **Staking** and **Projects Voting** for selected green projects
  
- ❖ **Carbon Asset Registry & Validation** with blockchain technology
  - Carbon asset from green sustainability (i.e. Mangrove, Corals, Forest areas)
  - Carbon asset from Green Energy projects
  - Transparency & Accountability
  
- ❖ Carbon Footprint Capture (IoT & AI)

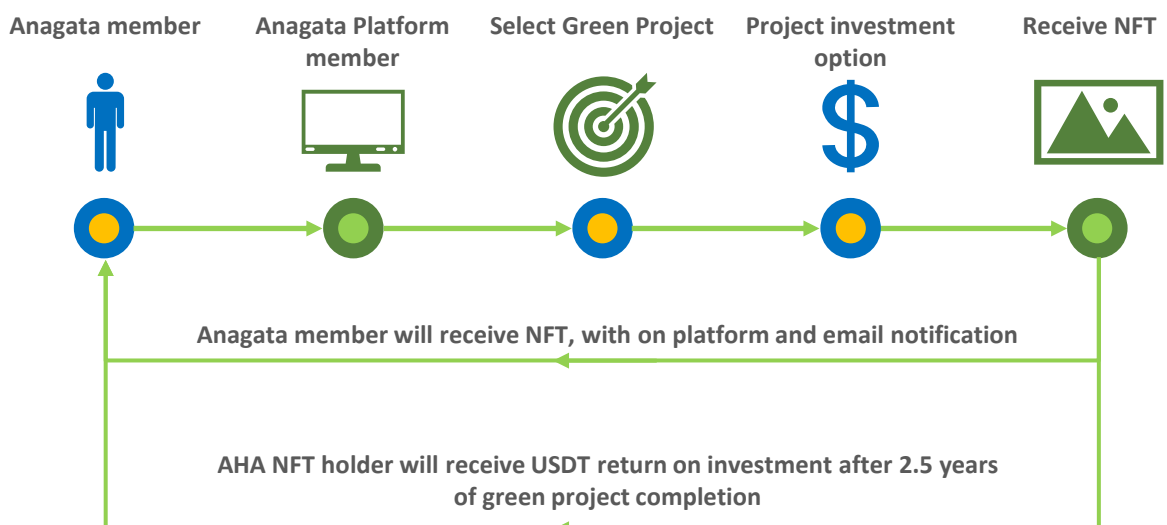

# HOW DOES IT WORK

How will communities be able to be part of Anagata project:

**Investment** for green projects:

- All Anagata platform members and AHA token holders will have a privilege to invest into real green projects.
- All green projects will be real carbon credit projects, located across Indonesia (rainforest, mangrove, coral reefs). All green projects listed will have all required licenses done.
- On every investment, each member will be getting an NFT of the green project, which will consist of metadata (unique image of the green project, geo tag, size and primary types of plant / coral). NFT will be received by each member 2 x 24 hours (maximum) after investment fund is completed.
- Each person who will keep their NFT for 2 years (T&C applies), will be entitled for ROI on the real business. Green project completion will be 2 years after investment funds are completed.
- Return of investment will be received six months (maximum) after each project completion.
- Return of investment will be given in a form of USDT for 3 consecutive years (T&C applies).
- Return of investment will be sent to wallet registered by each member on Anagata platform.

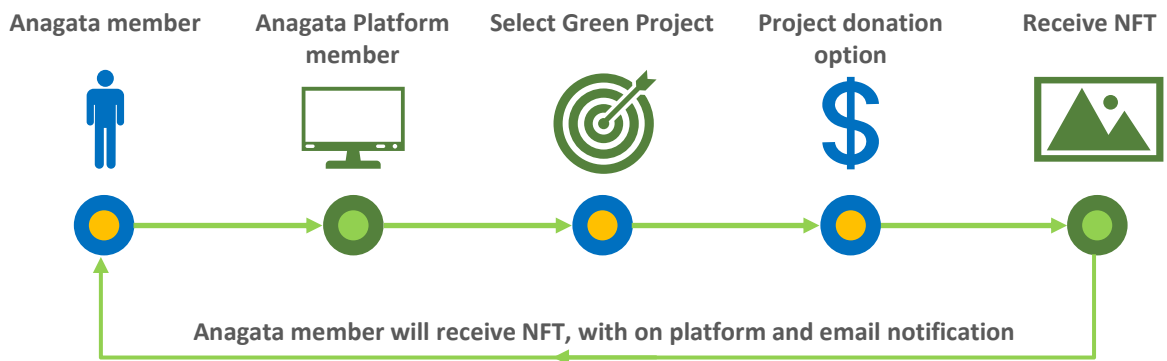

# HOW DOES IT WORK

How will communities be able to be part of Anagata project:

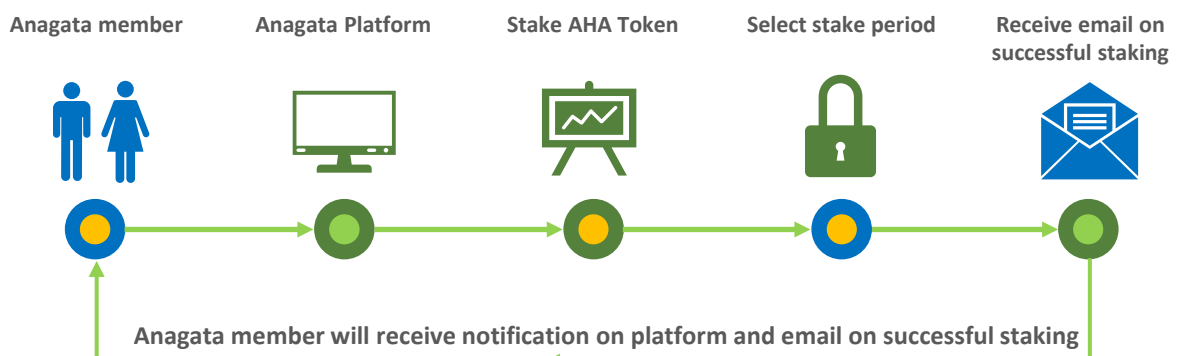

## Donation for green projects:

- All Anagata platform members and AHA token holders will have a privilege to donate into real green projects.
- All green projects will be real carbon credit projects, located across Indonesia (rainforest, mangrove, coral reefs)
- On every investment, each member will be getting an NFT of the green project, which will consist of metadata (unique image of the green project, geo tag, size and primary types of plant / coral). NFT will be received by each member 2 x 24 hours (maximum) after investment fund is completed.

## Staking AHA token:

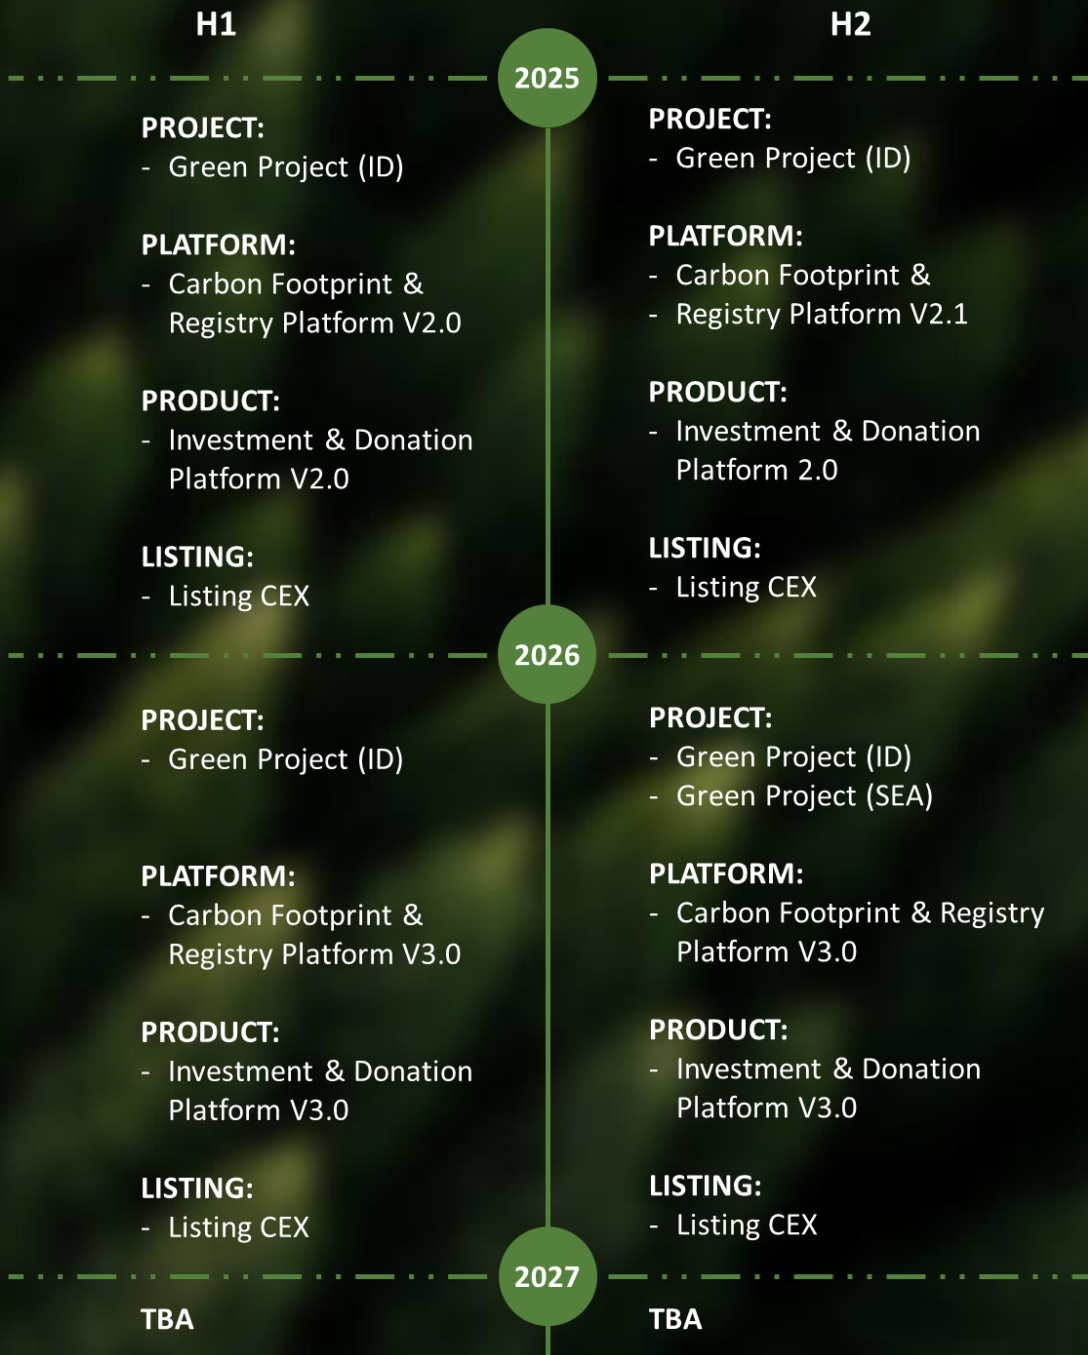

- All Anagata platform members will be able to stake their AHA tokens
- Staking period options: 1 / 3 / 6 / 9 / 12 / 15 / 18 / 24 months.

Token AHA (Alam Hijau Anagata), Token Kripto Ramah Lingkungan

Liputan6.com, Bali - Mata uang kripto atau *cryptocurrency* saat ini semakin populer di dunia investasi namun kerap disebut tak ramah lingkungan. Hal tersebut muncul karena pada proses 'penambangan kripto' memerlukan sumber energi, terutama berasal dari listrik berbahan bakar batu bara.
